

----Manager/SOS View

Upon first logging in as a manager, you will be greeted by a somewhat slim screen with a variety of features implemented. These features will allow you to look for total sales over a certain time period or, optionally select a customer. Upon selecting a customer, your view will expand to include the customer view, allowing you, the manager, to purchase as a customer. But that's not all, you can also view that specific customer's purchases, once again using a certain date and time.

If you do not like any of these options, there are three buttons called 'edit users' 'edit items' and 'edit discounts', all of which take you to vastly different pages that will allow the current manager, you, to edit user details, including your own, edit item details, and edit discounts.

----Edit Users

When you first press the edit users button, you will see two tables and a very large amount of textfields, along with a handful of combo boxes. All of these will hold data that can either be applied to a new user, or used to edit an existing user. It is also possible to delete users with the associated button, but editing and deleting users requires one to be selected from a jtable. Both of the jtables hold information for customers, and clicking information from either is valid. Upon selecting a customer, their information will fill all fields and combo boxes automatically, to make editing a more convenient process.

----Edit Inventory

When you first press the edit items button, you will see a scroll pane full of buttons on the right side, while the left side contains a group of text fields. If all required fields are filled with valid data, you will be able to add or edit data. Upon selecting a button, that item's data will fill all fields and it will be selected, allowing easy editing of items. You can also use this selected item's value to delete it entirely.

----Edit Discounts

When you first press the edit a button, you will see a table full of all discounts on the right side, while the left side contains a group of text fields and radio buttons. If all required fields are filled with valid data, you will be able to add or edit discounts. Upon selecting a discount from the table, that discount's data will fill all fields and it will be selected, allowing easy editing of discounts. You can also use this selected item's value to delete the discount.
